

## STEAM-CHAMBER CLEANING TOOL

The Steam-Chamber cleaning tool is designed for thorough high speed cleaning of large open areas of upholstery and stairs. You still need to use your standard hand tool for tight and curved spaces. Your cleaning results with the Steam-Chamber will improve with practice as you learn the proper techniques and methods of use. You have a two-week money back trial so use it all you can. The dirtier the job the more you will appreciate the thorough cleaning power of the Steam-Chamber.

1. Test fabric for color fastness and make sure it is a fabric that can be wet-cleaned.
2. Pre-spray area to be cleaned with cleaning agent.
3. Adjust the "suck down" factor using the vacuum relief shutter as needed. Too much suck down makes it difficult to move and/or may pull too hard on fabric. The proper amount of suck down is important for best results.
4. Keep entire 360" vacuum slot moving and in contact with surface while cleaning. Always do a vacuum only "back and forth" dry pass before lifting tool up from cleaning surface or residual water may spill out.
5. High vacuum and/or "loose" fabrics may require the vacuum relief vent to be wide open along with the cushion being held while cleaning in one pulling direction. Always release solution trigger about 8" before reaching the edge to suck up water in chamber.
6. For maximum results use with hot water.
7. For live help call toll free 800-284-0123 ext.6
